Import data from EXCEL to Oracle table using PL/SQL Developer

After long time I am writing this article.

Here I am explain how we can import EXCEL data into Oracle table by using PL/SQL developer.

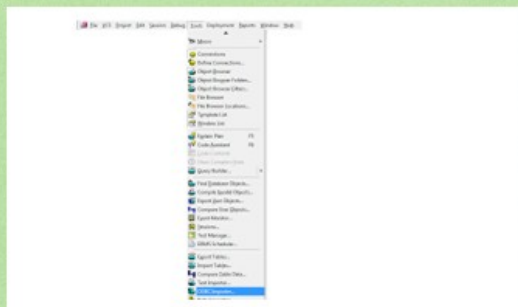

Here is the sample EXCEL sheet.

EID	ENAME	Salary
101	E1	24510
102	E2	64510
103	E3	2410
104	E4	24010
105	E5	45100

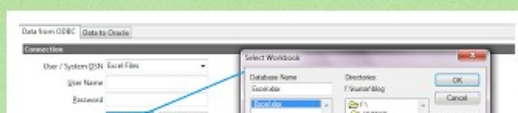

Now create a table with the columns, "EID", "ENAME" and "Salary" in the database as below.

```
CREATE TABLE test
(
  EID varchar2(100),
  ENAME varchar2(100),
  Salary varchar2(100)
)
```

Choose "ODBC Importer" from Tools Menu.

Select "Excel Files" from the drop down and click on "Connect". Now choose the Excel file and click "ok".

Note : Drives can be choose from the drop down as marked in the above image

Listed the all sheets in selected Excel file. Choose the sheet which having data. We can see preview of the data from "Result Preview".

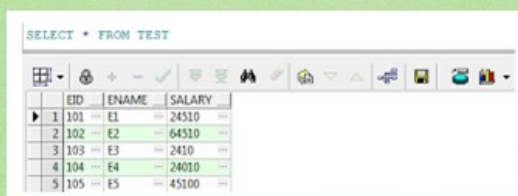

Click on "Data to Oracle" tab and select "Owner", "Table" from drop down.

In this case I created table "Test" under "SYS" owner. After selecting the table fields will be mapped automatically, because we created the columns with the same name of the excel columns. Check the preview and click on "Import".

Now Excel data transfer into Oracle table, "TEST".
